The Formentera Council's department of new technologies reports that operations to equip the town of Sant Ferran with a fibre optic network began today.

With the service's rollout already a reality in Sant Francesc and surrounding neighbourhoods, crews are turning their attention to Sant Ferran. In roughly three months' time, area residents will be able to contract the service just like their neighbours in Sant Francesc.

In the installation operators are using piping that was prepared during roads upgrades this winter.

New technologies secretary Rafael González gave thanks to Telefónica for their efforts bringing fibre optic to Formentera.
